Hays Land and Cattle has added a "\$Profit™" index in order to help bring profit to your cow herd. In our opinion, this is the best index in the industry to use. It more accurately accounts for both production and cost in the cow herd.

\$Profit™ Index: One, simple, proven number that gives each trait a weight according to its impact on profit. This takes into account fertility, growth, feed intake, and carcass merit. This index is the fastest method to improve the overall profitability of a herd of beef cattle.
